

COCC and Sandbox Banking empower banks and credit unions with unparalleled tech flexibility.

COCC is dedicated to keeping financial institutions agile with open APIs for its core banking platform, *INSIGHT*. Recognizing that innovative banks and credit unions want to push boundaries by integrating additional software systems or building their own, COCC champions seamless collaboration and the power of choice.

For over four years, COCC and Sandbox Banking have partnered to empower banks and credit unions with core banking integrations that drive growth and efficiency. Now, in an exclusive partnership, COCC has chosen Sandbox Banking as its API Management and Integration Platform as a Service (iPaaS) provider. Sandbox Banking will power COCC's new ConnectSuite APIs, offering financial institutions unparalleled flexibility in their fintech integrations.

Revolutionizing fintech with cutting-edge integrations

Revolutionizing fintech with cutting-edge integrations COCC's ConnectSuite platform enables its customers the ability to quickly and securely provision access to APIs. Through ConnectSuite, developers can rapidly test and implement live banking APIs, reducing the time to first call. ConnectSuite's APIs are powered by Sandbox Banking's iPaaS, Glyue™.

Institutions using ConnectSuite with Glyue™ will have rich integrations with any fintechs they choose. Third-party developers can be granted immediate access to collaborative environments within COCC's Developer Studio. This gives financial institutions greater control over development timelines and lets them bring next-generation banking solutions to their customers or members even faster.

"COCC and Sandbox Banking provide a flexible delivery model for banks and credit unions to amplify their core banking system and integrate with existing and emerging technologies," says Ravi Balasubramanian, CEO of Sandbox Banking. *"We have shared values of delivering timely solutions and enhancing business for financial institutions."*

"This initiative goes beyond technology. It's about empowering community banks and credit unions to chart their own course in the fintech landscape and equipping them with the capability to capitalize on emerging opportunities."

Matt L'Heureux

Senior Vice President &
Chief Product Officer at COCC

COCC + Glyue™

Enhanced vendor experience: Accelerate speed-to-market and reduce onboarding friction for vendors, fostering smoother developer and implementation experiences.

Synchronized systems: Create and synchronize account holder details across various systems, including CRMs and core banking platforms, ensuring data consistency and accessibility.

Flexibility: Provide banks and credit unions with the flexibility to seamlessly integrate and innovate with a wide range of Fintech partners, promoting independence and choice.

Expand your integration projects

Through ConnectSuite and Glyue™, banks and credit unions can implement a wide range of integration projects, including:

- Automated loan booking from leading loan origination systems
- Streamlined deposit account creation and onboarding processes
- Synchronized customer or member details across systems
- Design robust and efficient workflows

Every integration enhances efficiency and accuracy while reducing manual effort. Banks and credit unions can select a best-in-class fintech partner and create a seamless integration to COCC *INSIGHT*.

Seamless Synergies: How we empower you today.

Our years of collaboration with industry-leading partners have resulted in a robust collection of pre-built integrations, empowering banks and credit unions to elevate their services and streamline their operations.

- Commercial loan booking with nCino
- Customer360 with nCino
- Deposit account opening (DAO) with nCino
- Mortgage loan booking with Encompass (ICE Mortgage)

A better alternative to API gateways

While large companies offer API gateways that can connect disparate systems, they often lack a commitment to customer success. Additionally, many are off-the-shelf products without a specific focus on the banking industry. COCC chose Sandbox Banking after thoroughly evaluating industry leaders in the API platform space. Both companies share an unparalleled focus on service, and the partnership supports the integration needs of the most innovative banks and credit unions.

ConnectSuite and Glyue™ APIs provide developers with self-service documentation and API testing capabilities. Developers can research, troubleshoot, and resolve issues on their own, or reach out to COCC and Sandbox Banking for assistance. *“Our partnership with Sandbox Banking streamlines customer vendor integration, in-house development, and banking-as-a-service (BaaS) initiatives,”* says Matt L’Heureux, Senior Vice President and Chief Innovation Officer at COCC. *“Banks and credit unions can create unique projects that not only improve their customer and member engagement but also unveil new avenues for revenue generation.”*

About COCC

As an industry-leading fintech provider, COCC delivers innovative, comprehensive technology solutions and strategic partnerships with an unparalleled focus on service. Offering a robust, feature-rich suite of modern, standards-based core and digital banking solutions, COCC’s cutting-edge systems are designed with intuitive user interfaces and are fortified by advanced APIs which seamlessly facilitate leading fintech integrations. Consistently ready to adopt and embrace emerging technologies, COCC remains agile and forward-thinking, meeting the demands of a rapidly evolving financial landscape where live real-time functionality matters. COCC is forever dedicated to assisting community banks and credit unions with remaining strong and competitive by providing the technology, support, and expertise needed to succeed.

About Sandbox Banking

Sandbox Banking is a digital transformation partner that can help unlock revenue via Glyue™, our groundbreaking Integration Platform as a Service (IPaaS) offering for banking. Glyue™ is the only major IPaaS focused solely on fintechs and financial institutions. It provides connectors between 14+ of the most popular core banking platforms and more than 50 lending, deposit, KYC/AML, data, cards, underwriting, mobile banking, and analytics solutions from the world’s best providers.
